

**January 18, 2007- Norwalk CT-** Transpo Industries, Inc. of New Rochelle NY installed one of forty-five EnviroSafe™ Modular Stormwater Catch Basin Filtration Systems today at Veterans Memorial Park. This was done for the Norwalk DPW under a grant by the National Fish and Wildlife Foundation. Present at this installation were engineers from local municipalities as well as the news media.

EnviroSafe™ is designed to economically fit into existing stormwater drains to capture and filter the many pollutants common to stormwater runoff. These include trash, debris, sediments, oils, grease as well as soluble metals. This new filtering technology incorporates a potent antimicrobial treatment that inhibits bacteria, virus and mold growth.

The EnviroSafe™ installation took place outside at the far end of the park on a cold and windy day. Afterwards, about twenty individuals attended an informative luncheon lecture at the Maritime Aquarium. Transpo CEO Arthur Dinitz introduced Julie Belaga, former Regional Administrator of the EPA and current board member of Save the Sound. Ms. Belaga spoke on the need for local stormwater filtration along our waterways. Following this was a technical presentation by Steve Orman and Product Developer Jack Peter Sr. A question and answer period followed.
