Transpo Industries, Inc. manufactures a variety of innovative products and materials designed for improving road safety and bridge preservation. The company’s reputation as an expert in rehabilitation, preservation and safety has made Transpo a leading supplier since 1968.

Visi-Barrier®
PRECAST POLYMER CONCRETE BARRIER PANEL

All-Weather Retro-reflective Safety Barrier

Visi-Barrier® is a highly visible traffic barrier with FHWA approval and decades of proven successful projects. It is designed for new installations acting as a stay-in-place form or on retrofit projects with simple bolt through connections.

The continuous vertical Visi-Stripe® available on each panel is made with highly retro-reflective glass beads. The result is a solution to poor roadway delineation problems, especially on rainy nights when visibility is low and standard roadway markings can lose retro-reflectivity when covered with water.

SAFER TRANSPORTATION THROUGH INNOVATION

Visi-Barrier® is a year-round, all weather, high visibility panel for driver safety. Lightweight, sustainable solution for aging bridge parapets and tunnel bench walls.
Visi-Barrier®
PRECAST POLYMER CONCRETE BARRIER PANEL

Features and Advantages
- Acts as a permanent, stay-in-place barrier form
- Retro-reflective Visi-Stripe® gives high visibility in all weather conditions
- Available in various standard safety shapes
- Can be custom fabricated to meet project requirements
- State-of-the-art precast polymer concrete
  - Gel Coat Resists salts, chlorides and corrosion

Applications
Visi-Barrier® is available in standard and custom sizes and colors to suit a variety of applications including:

Median Barriers:
Visi-Barrier® helps form a full or half New Jersey type or F-shape stay-in-place permanent barrier.

Tunnel Panels:
The precast polymer concrete barrier is available in modified shapes for use on bench walls offering corrosion and impact protection.

Bridge Parapets and Rails:
Visi-Barrier® can be custom designed to fit a variety of bridge site characteristics. Length, height, and shape of the barrier are varied depending on the projects and design.

Each installation meets the highest safety standard and provides the best solution for protecting bridge parapets and rails.
